

TEGO® Dispers 741 W – economical, high performance dispersing additive for waterborne pigment concentrates

March 30, 2011

Especially in Deco-paints, a well balanced cost calculation is very important. The new wetting and dispersing additive TEGO® Dispers 741 W enables formulators to develop cost-efficient colorants with outstanding colour strength. TEGO® Dispers 741 W can be used for the formulation of dispersions based on organic, inorganic and carbon black pigments and is highly compatible with a broad variety of binders.

TEGO® Dispers 741 W stabilizes pigment particles efficiently and leads to long term stable pigment dispersions.

TEGO® Dispers 741 W is an aqueous solution of a polymeric wetting and dispersing additive based on renewable resources. It is free of organic solvents and alkylphenoethoxylates.

Additives

Additives from Evonik Industries play an important role in the development of high-quality coating systems. Depending on their type, additives can optimize the production process of the coating, adjust the application properties, or selectively influence the properties of the cured coating film. The TEGO® name stands for a wide range of additives for the most diverse liquid coating systems and printing inks.

AEROSIL® fumed silica allows selective adjustment of the flow behavior of paints and coatings. It also prevents sedimentation, or settling, of the pigments, fillers, and matting agents contained in coating systems.
